cURL for RESTful API testing

Parameter	
`-i`	show response headers
`-H`	pass request headers to the resource
`-X`	pass a HTTP method name
`-d`	pass in parameters enclosed in quotes; multiple parameters are separated by '&'

Examples

PUT a resource:

```
curl -i -H "Accept: application/json" -X PUT -d "phone=1-800-999-9999" http://192.168.0.165/persons/person/1
```

GET a resource:

```
curl -i -H "Accept: application/json" http://192.168.0.165/persons/person/1
```

For GET requests, the -X GET option is optional:

```
curl -i -H "Accept: application/json" http://192.168.0.165/persons?zipcode=93031
```

You can pass in query parameters by appending it to the url:

```
curl -i -H "Accept: application/json" http://192.168.0.165/persons?firstName=james&lastName=wallis
```

DELETE a resource:

```
curl -i -H "Accept: application/json" -X DELETE http://192.168.0.165/persons/person/1
```
